

Tamil Nadu Crop Yield Advisory

Generated on: 2026-06-10 20:19

1. Farm Summary

District	Namakkal
Crop	Cotton
Season	Rabi

2. Yield Prediction

Predicted Yield	1.35 tonnes/hectare
Historical District Average	1.32 tonnes/hectare
Difference	+0.03 tonnes/hectare

3. Current Weather Data (Live)

Current Temperature: **29.6 °C**
Estimated Daily Rainfall: **909 mm**

4. Key Factors Affecting Yield

The following factors are having the biggest impact on your predicted yield:

- **Crop Type:** Negative impact (54.9%)
- **Previous Yield:** Negative impact (42.7%)

5. Action Plan & Advisory

- ■ General Conditions: Conditions are broadly favorable. Follow Good Agricultural Practices (GAP).
- ■ Sowing Window: Sow within the optimal 2-week window for your region to maximize radiation interception.
- ■ Pest & Disease: Scout fields every 7 days. Use Integrated Pest Management (IPM) over chemical spraying.
- ■ Market Linkage: Register at the nearest APMC mandi at least 4 weeks before estimated harvest to secure fair prices.

Disclaimer: This is an AI-generated advisory based on historical data and current conditions. Always consult local agricultural extension officers for critical farming decisions.
