

Tamil Nadu Crop Yield Advisory

Generated on: 2026-06-10 20:37

1. Farm Summary

District	Ramanathapuram
Crop	Rice
Season	Kharif

2. Yield Prediction

Predicted Yield	3.95 tonnes/hectare
Historical District Average	3.50 tonnes/hectare
Difference	+0.45 tonnes/hectare

3. Current Weather Data (Live)

Current Temperature: 30.6 °C
Estimated Daily Rainfall: 442 mm

4. Key Factors Affecting Yield

The following factors are having the biggest impact on your predicted yield:

- **Crop Type:** Negative impact (48.7%)
- **Previous Yield:** Negative impact (45.7%)
- **Hist. Rainfall:** Negative impact (1.6%)

5. Action Plan & Advisory

- ■ Rainfall / Irrigation: Consider drip/sprinkler irrigation to compensate for rainfall deficit.
- ■ Sowing Window: Sow within the optimal 2-week window for your region to maximize radiation interception.
- ■ Pest & Disease: Scout fields every 7 days. Use Integrated Pest Management (IPM) over chemical spraying.
- ■ Market Linkage: Register at the nearest APMC mandi at least 4 weeks before estimated harvest to secure fair prices.

Disclaimer: This is an AI-generated advisory based on historical data and current conditions. Always consult local agricultural extension officers for critical farming decisions.
